Editorial
By Lillee Gelinas, Editor-in-Chief
Can robotics be used in patient care, and where do you draw the line?

Effective bag-valve-mask ventilation saves lives
By Huy Vo, Matthew Park, and Simson Wang
Basic airway management can mean the difference between life and death for patients. Learn simple techniques and tips to ensure proper ventilation and oxygenation of your patient in respiratory distress or respiratory arrest.

Medical device reporting—a model for patient safety
By Suzanne Rich and Michael El-Shammas
As a nurse, you aren't required to report medical device problems, but your voluntary reports can help prevent injury and even death. Find out how to report problems to manufacturers and the FDA.

Strictly Clinical

Rapid Response
35 Opioid overdose
By Deborah S. Finnell and Christine L. Savage
A patient accidentally overdoses on prescription oxycodone. Administration of naloxone by the EMT saves her life, but what steps will the ED nurse take to ensure the patient's future safety?

WHAT WORKS
Code green prevents workplace violence
By Yana Dilman and Faye Gardner
According to a 2015 OSHA report on workplace violence, 27 out of 100 fatalities in healthcare settings in 2013 resulted from assaults and acts of violence. Learn how one hospital uses de-escalation to protect staff and patients. Available at AmericanNurseToday.com/?p=24946.

33 How do we manage in uncertain times?
By Pamela F. Cipriano
When the political climate leads to uncertainty within health care, how do nurses stay focused on their core values?

34 Transparency and accountability in nurse staffing
By Sharon A. Morgan
Without appropriate levels of nurse staffing, patients risk longer hospital stays, increased infections, avoidable medication errors, falls, injuries, and even death. Transparency in nurse staffing encourages accountability.
